

Nuveno 1.7 installation notes

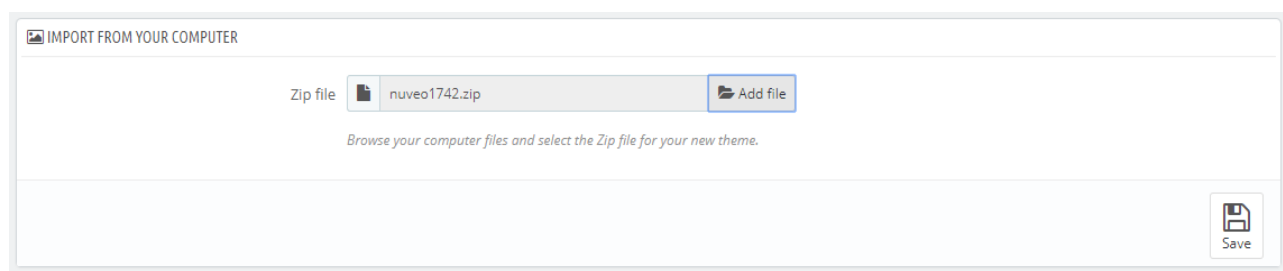

To install this theme you must have a working version of Prestashop already installed. For information in regard to installing the Prestashop platform, please see the [Prestashop User Guide](#)

1. Installation – Import from Preferences > Themes (recommended)

1. Login to your Prestashop administration and go to Design – Theme & Logo.
2. Click on “Add new theme”

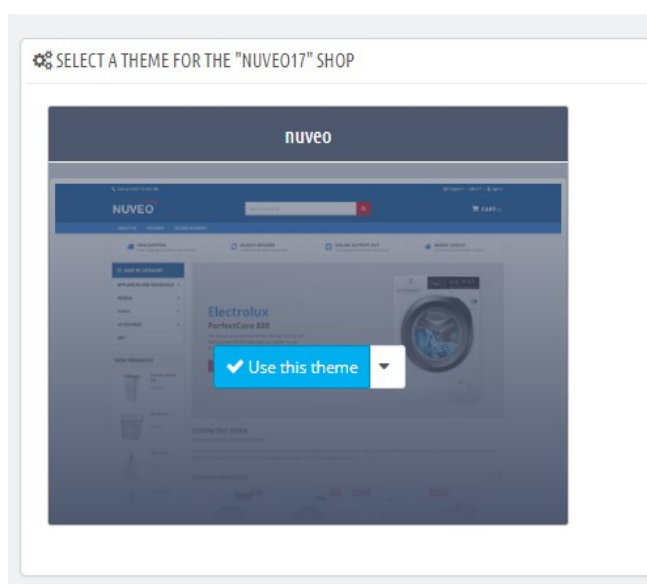

3. Select the zip with theme, click on “Save”

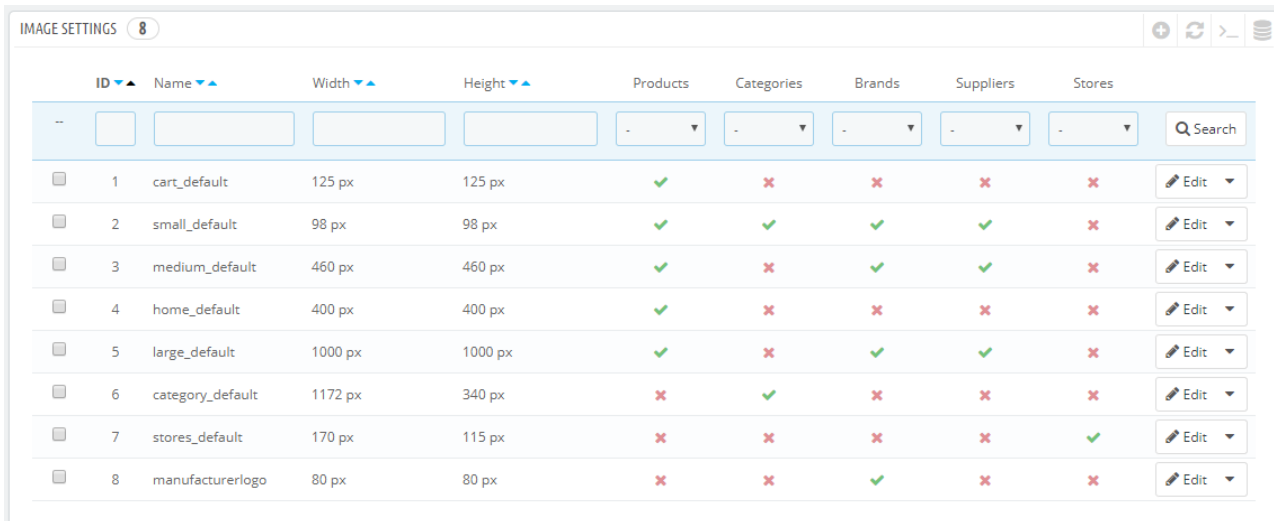

If you receive some error about uploading zip file, try to copy the theme zip manually into your FTP to /themes/ folder and then use “Import from FTP” option.

4. In section “Select a theme”, find “Nuveno” and click on “Use this theme”

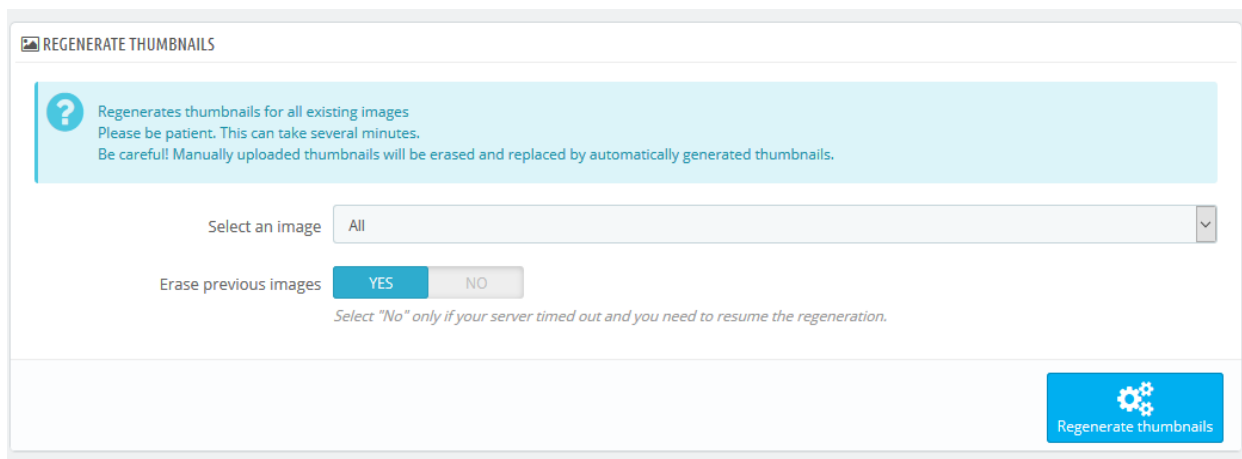

5. Go to "Design → Image settings". You should see image preferences setup according to the following screenshot:

The screenshot shows the 'IMAGE SETTINGS' interface with a table of image preferences. The table has columns for ID, Name, Width, Height, Products, Categories, Brands, Suppliers, and Stores. Each row represents a different image type with its dimensions and status for various modules.

ID	Name	Width	Height	Products	Categories	Brands	Suppliers	Stores	
1	cart_default	125 px	125 px	✓	✗	✗	✗	✗	Edit
2	small_default	98 px	98 px	✓	✓	✓	✓	✗	Edit
3	medium_default	460 px	460 px	✓	✗	✓	✓	✗	Edit
4	home_default	400 px	400 px	✓	✗	✗	✗	✗	Edit
5	large_default	1000 px	1000 px	✓	✗	✓	✓	✗	Edit
6	category_default	1172 px	340 px	✗	✓	✗	✗	✗	Edit
7	stores_default	170 px	115 px	✗	✗	✗	✗	✓	Edit
8	manufacturerlogo	80 px	80 px	✗	✗	✓	✗	✗	Edit

On the same screen, click on **Regenerate thumbnails**

The screenshot shows the 'REGENERATE THUMBNAILS' dialog box. It contains a warning message, a dropdown menu to select an image, and buttons to 'YES' or 'NO' to erase previous images. A large blue button at the bottom right says 'Regenerate thumbnails'.

REGENERATE THUMBNAILS

Regenerates thumbnails for all existing images
Please be patient. This can take several minutes.
Be careful! Manually uploaded thumbnails will be erased and replaced by automatically generated thumbnails.

Select an image: All

Erase previous images: YES NO

Select "No" only if your server timed out and you need to resume the regeneration.

Regenerate thumbnails

2. Manual installation

If you have problems with manual installation, you can install the theme manually:

1. Unzip the theme ZIP file
2. Copy all folders (except "dependencies" folder) and files from ZIP archive into /themes/nuveo/ on your FTP
3. Copy content of folder "dependencies" into /modules/ on your FTP.
4. Continue according to section 1, from point 4.

Now the theme is installed and you need to configure it's modules.

If you have problems anyway, feel free to contact us and we will help you with the installation.

2. Configuration of modules

Nuveo theme is provided with several additional modules that should be configured. You will find them in Modules, on tab „Installed modules“.

In the other part of the same module, you can upload images to the homepage.

The recommended size of images for hook DISPLAYBANNERBOTTOM is 892 x 490 px (that covers also displays with higher resolution. If you don't care about Retina etc., the minimum size would be 571 x 314 px).

If you use Adobe Photoshop, you can use banner.psd located in PSD folder of theme ZIP archive.

Nuéo Vertical menu

In the configuration screen of the module, you can assign the first level categories of vertical menu. The subcategories will be loaded automatically.

Nuveo image slider in sidebar

There is another module “Nuveo New products block” which works the same way, but it is displayed on category pages in left column. The size of images for that module is 287 x 306 px.

Nuveo anufacturer logos in footer

this module automatically displays logo of manufacturers, that are setup in „Catalog“ → “Brands & Suppliers”. There must be at least one product assigned to the brand, in order to display the logo.

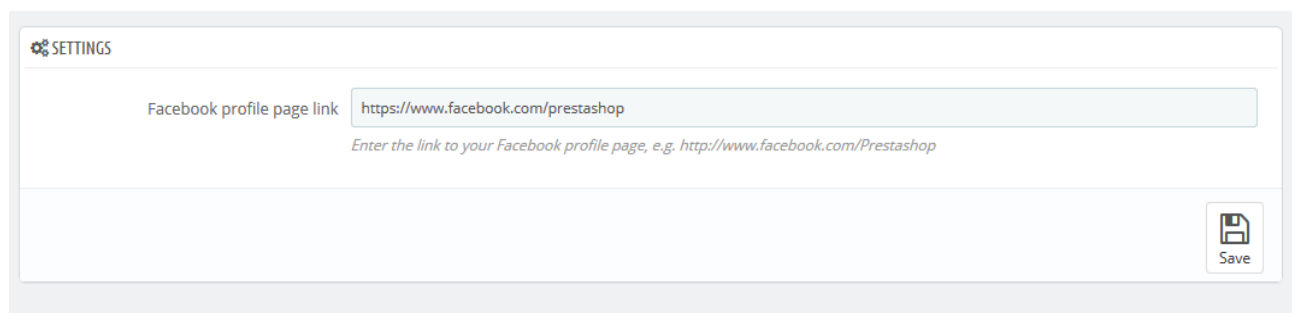

The screenshot shows the 'SETTINGS' page for the Nuveo module. It contains several configuration options:

- Select size of logo:** A dropdown menu with 'small_default' selected. Below it, a note states: 'Choose small_default or manufacturerlogo size. small_default is default image size which already exists in Prestashop. If you want to use custom logo size, create new size in Preferences - Image with name manufacturerlogo and size as required. Then regenerate thumbnails.'
- Visible items:** A text input field with the value '6'. Below it, a note states: 'The number of visible items (for desktop mode)'.
- Scroll items:** A text input field with the value '6'. Below it, a note states: 'The number of items to scroll (desktop mode)'.
- Speed:** A text input field with the value '400'. Below it, a note states: 'Determines the duration of the transition in milliseconds between slides'.
- Autoplay:** Two radio buttons, 'YES' and 'NO'. The 'NO' button is selected. Below it, a note states: 'Determines whether the slider should scroll automatically or not'.
- Mouseover pause:** Two radio buttons, 'YES' and 'NO'. The 'YES' button is selected. Below it, a note states: 'Determines whether the timeout between transitions should be paused on mouse hover, when autoplay is enabled'.
- Loop:** Two radio buttons, 'YES' and 'NO'. The 'NO' button is selected. Below it, a note states: 'Infinity loop'.

A 'Save' button with a floppy disk icon is located at the bottom right of the settings area.

Nuveo Facebook Fan Page

The screenshot shows the 'SETTINGS' page for the Nuveo module, specifically for the Facebook fan page link. It contains one configuration option:

- Facebook profile page link:** A text input field with the value 'https://www.facebook.com/prestashop'. Below it, a note states: 'Enter the link to your Facebook profile page, e.g. http://www.facebook.com/Prestashop'.

A 'Save' button with a floppy disk icon is located at the bottom right of the settings area.

HOMEPAGE PRODUCT SLIDER MODULES

We recommend number of products for each module to be not more then 20.
20 products per module means possible 60 products on homepage, which is reasonable number for both speed and user experience.

Nuвеo Featured products on the homepage

 SETTINGS

 To add products to your homepage, simply add them to the corresponding product category (default: "Home").

Number of products to be displayed

8

Set the number of products that you would like to display on homepage (default: 8).

Category from which to pick products to be displayed

2

Choose the category ID of the products that you would like to display on homepage (default: 2 for "Home").

Randomly display featured products

YES

NO

Enable if you wish the products to be displayed randomly (default: no).

3. Tips

Advanced parameters - Performance

Recommended settings for production shop is to enable CCC for CSS and JavaScript. You can try to enable Apache optimization too.

The screenshot shows the 'CCC (COMBINE, COMPRESS AND CACHE)' settings panel. At the top, there is a light blue informational box with a question mark icon and the text: 'CCC allows you to reduce the loading time of your page. With these settings you will gain performance without even touching the code of your theme. Make sure, however, that your theme is compatible with PrestaShop 1.4+. Otherwise, CCC will cause problems.' Below this, there are three toggle switches: 'Smart cache for CSS' (set to YES), 'Smart cache for JavaScript' (set to YES), and 'Apache optimization' (set to NO). A 'Save' button with a floppy disk icon is located in the bottom right corner.

Using logo in PNG format (transparent)

With default settings, Prestashop supports logo only in JPEG format. In order to allow PNG logo, go to Design → Image settings, find section “Images generation options” and setup as follows:

- Image format ☐ Use JPEG.
- ☒ Use PNG only if the base image is in PNG format.
- ☐ Use PNG for all images.

Then you will be able to upload also PNG logo. You can still use JPEG as well.
